

The 50L Home Pilot

A Blueprint for Scaling Household Water Efficiency

Video

What are some reactions and key takeaways?

Premise

Reduce water use by making sustainability irresistible

We're not *asking* households to use less water.

We're supporting performance-driven design and behavior change strategies that make home routines simpler and more convenient – water savings naturally follow.

Who we are

50L Home: a public-private platform for innovation

Co-Chairs

Members

Partners

Secretariat

Collaboration

Private sector: design and innovation

Utilities: service delivery

Government: regulation

Households: use behaviors

OUR MISSION

Make 50-liter living the standard through innovation that improves quality of life.

Opportunity

Why indoor water efficiency, why now

Reliable & consistent

Indoor use is stable across seasons, climate, and weather. Indoor savings don't evaporate in a wet year.

Globally replicable

A family in Los Angeles, London, or Chicago needs roughly the same indoor water.

Energy co-benefits

Water heating is roughly a fifth of residential energy use. Every gallon of hot water saved cuts emissions and bills.

LA Pilot

Two years, three phases, fixture-level data

31

households

15

retrofit / 16 control

2 yrs

of measurement

6

submeters per home

METHODOLOGY

- Whole-home Flume monitors plus Droople fixture submeters at six points per home
- Sub-minute flow rates and water temperatures – 250M+ data points
- Capture behavioral data on whole-home water use

PHASE 1 4 months

Baseline

Existing fixtures and appliances measured across all 32 homes.

PHASE 2 12 months

Market-available retrofits

Latest products you can buy today Kohler/IKEA fixtures, Electrolux W/D, P&G consumables.

PHASE 3 12 months

Prototype products

Next-generation fixtures (~30% below code), prototype appliances, recirculating shower test.

LA Pilot

High-frequency monitoring at the appliance level

Headline Results

21

**gallons / person /
day**

56%

**less water use than LA
household average**

4.4

/ 5 satisfaction

18%

**reduction in energy
use relative to
baseline**

Savings Potential

KITCHEN: 6,514 gallons per year

HE Faucet/Dishwasher + HE Detergent

- ✓ No need to pre-rinse / soak dishes before using dishwasher → kitchen sink water use drops by 25%

BATHROOM: 10,710 gallons per year

1.0 GPF Toilet + HE Faucet + HP Toilet Paper

- ✓ Reduced double flushing
- ✓ Fewer clogs

SHOWER: 10,710 gallons per year

HP Showerhead + 2-in-1 Products

- ✓ Reduced streamflow by 14% with no change in shower length

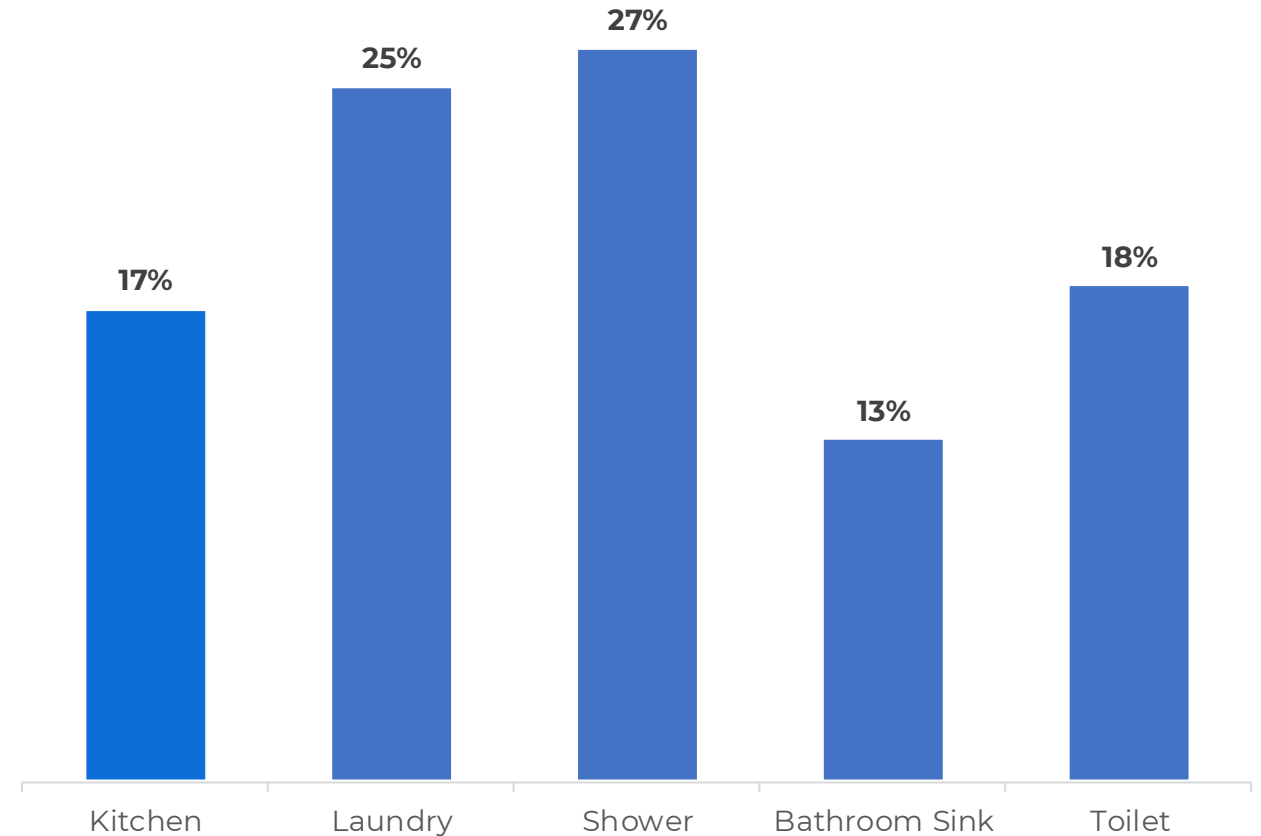

LAUNDRY: 6,661 gallons per year

HEFL Washer & HE Coldwater Detergent

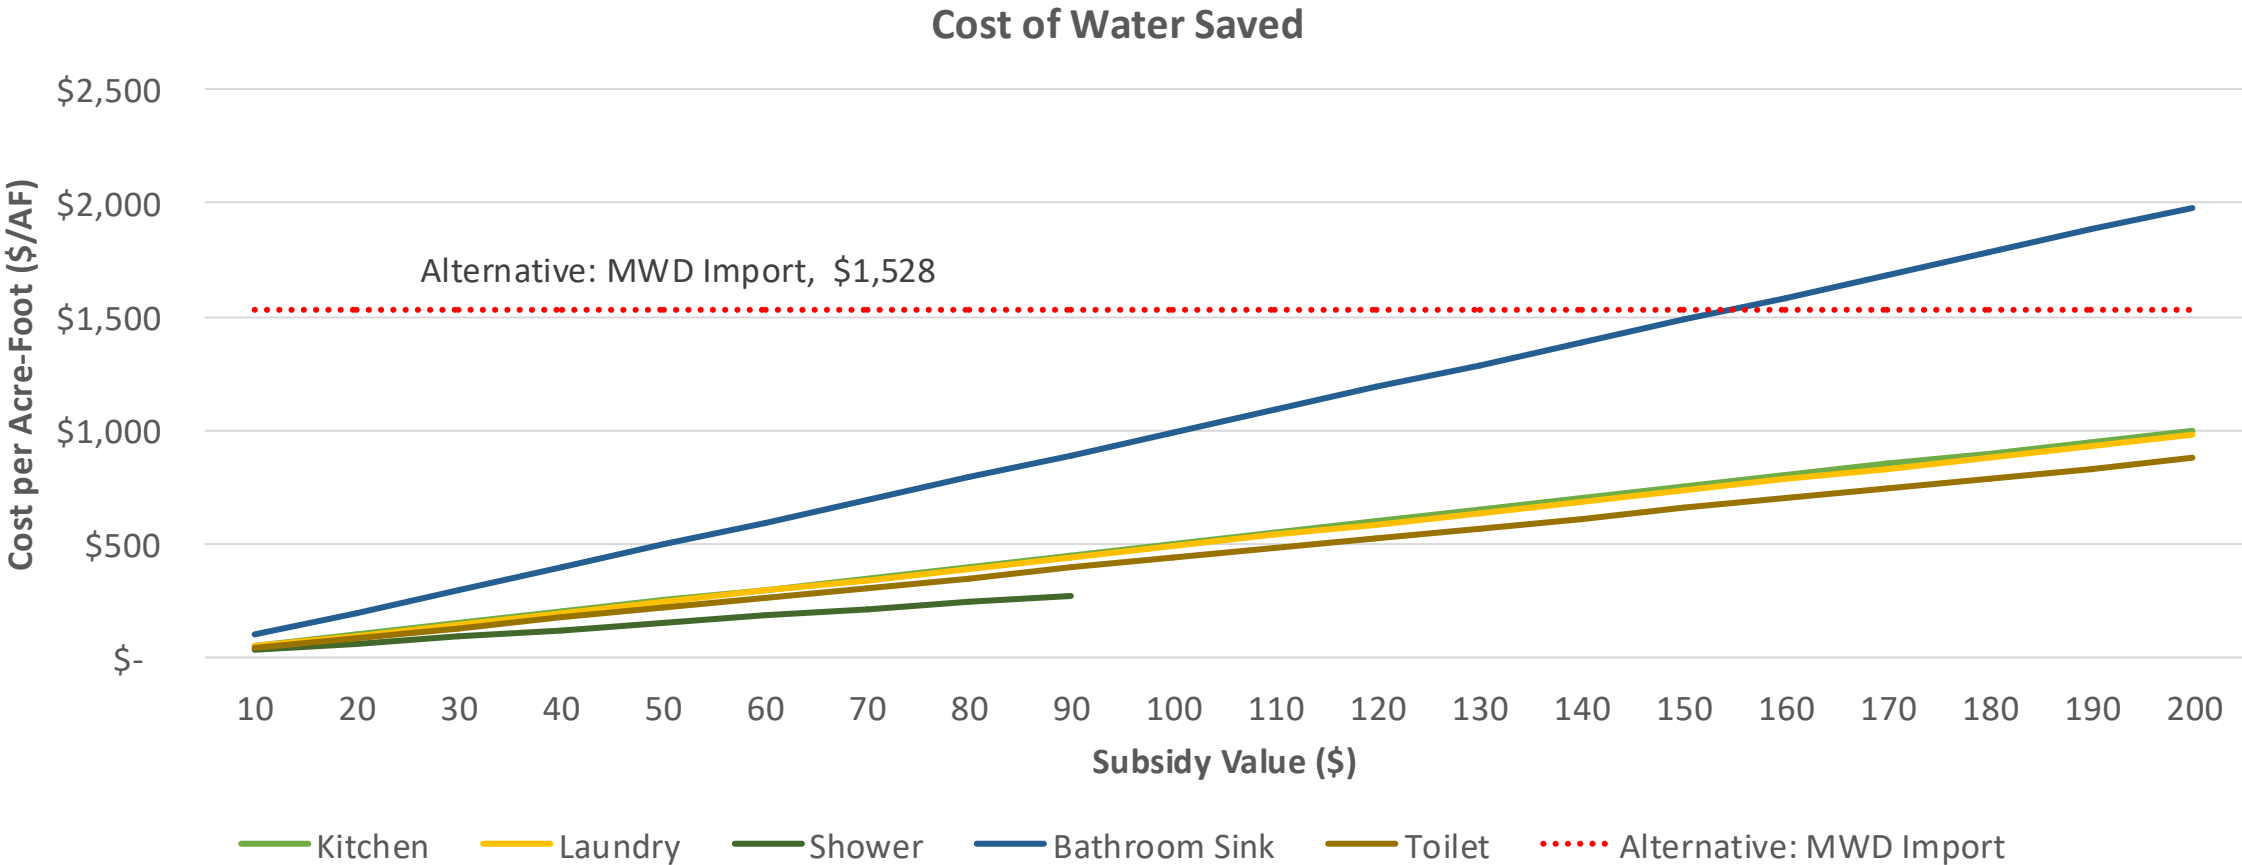

- ✓ Enables cold-water rinse cycles – no need for separating clothes and can run larger loads

Where did the savings come from? (% of total reductions in indoor use)

Savings Potential

Indoor efficiency is comparable to alternative supply options
